## Experience

### Zhihu

Front-end Developer/Front-end Developer Intern, 2014-2017

### MyDocumate.com

Front-end Developer, 2013-2014

### Taobao

Front-end Developer Intern, 2013.7

### Nanjing University Lily Studio

Leader of Art Group, 2012-2013

## Projects

### Rich Text Editors 2016-2017

I have been working on two rich text editors recently, one of which is a part of the new version of Zhihu Web, supporting features like Zhihu column editor, comment box and answer box. The other one is an outsourcing project, something like an experience sharing forum. The two are based on Draft.js and Slate respectively, and are both based on React. I solved issues about nested structure, data storage and compatibility, plugins, Chinese input method and so on.

⇒ 《Use Draft.js on Zhihu.com》 (<https://zhuanlan.zhihu.com/p/24951621>)

⇒ Editor demo based on Slate (<http://editor.jzf.life>)

### Zhihu AppView Experiment 2017

For the goal of achieving more consistent user experience and higher developing efficiency. Front-end team at Zhihu began to maintain specific pages in Zhihu iOS and Android App, such as answer content page. My work focused on communication between web and native, abstraction and reuse, etc.

### zhihu-components 2016

It's a component kit for Zhihu products which is a byproduct of the new version of Zhihu Web. The repository is contributed by both engineers and designers, including React components, corresponding Sketch files and conventions. I was in charge of daily maintenance, code review, change log and publishing of new version.

### New Version of Zhihu Web 2016

This is a fairly large job because it's both redesign and refactor. We had migrated from Tornado Template/UIModule + Google Closure + jQuery to a universal React app (Koa2 + Redux + React). Among tasks including business logic, modularization, code splitting, API optimization, server rendering and event tracking, I was primarily responsible for question/answer/comment modules and component abstraction.

### Douya 2013

Individual project inspired by Douban.com, server side of which is driven by Apache and Django.
